Design Engineering & Analysis . Model Of Concurrent Engineering . A typical model of CE in the realization of a product is shown in Figure 1. The CE model relies on a CE team that is responsible for the total product life-cycle, from idea to finished product. Such a team brings together design, engineering, and manufacturing expertise.

Model of Concurrent Engineering

Concurrent Engineering is not limited to the products or goods. Even services can employ concurrent engineering for improvement in productivity and reduction in total time to market. Although this may not lead to reduction in number of employees or the work to be done, the adoption of concurrent engineering would lead to a faster lead time.

A Report On Concurrent Engineering Management Essay

The concurrent process model can be represented schematically as a series of major technical activities, tasks, and their associated states. For example, the engineering activity defined for the spiral model is accomplished by invoking the following tasks: prototyping and/or analysis modeling, requirements specification, and design.
